

01 MAKE WAVES · XRPL HACKATHON

MainStreet.

AI-Powered **CAM Reconciliation**
Settled on the **XRP Ledger**

● Live on **XRPL mainnet** — RLUSD settled · [7FA730B2...FC724A](#)

From the sentence in the lease to the hash on
the ledger — every dollar traceable.

CAM reconciliation is the most disputed bill in commercial real estate.

Landlords recover shared operating costs from tenants every year. The process runs on spreadsheets and misread leases — so error-prone that an entire consulting industry exists just to audit the mistakes.

TIMELINE

Weeks

Per property, every year — done by hand.

TOOLING

Spreadsheets

Lease terms keyed in manually, caps missed.

TRUST

Disputes

Tenants challenge charges they can't verify.

PAYMENT

Slow

Wires and checks — days, fees, no proof of what.

One pipeline: lease in, settled dollars out.

AI reads the document; deterministic code computes the money; the ledger settles it with proof. Every step keeps its evidence.

01

Extract

AI reads lease terms — with a verbatim quote and page for every field.

02

Calculate

CAM allocated automatically — pro-rata, caps, exclusions.

03

Explain

Every charge traces back to the clause that authorizes it.

04

Resolve

Disputes handled against documents, with an audit hash.

05

Settle

RLUSD payment on XRPL — dollars, on-ledger, verifiable.

An AI asset manager for the money side of CRE.

Good evening, Judge

Your portfolio right now: 1 property · 5 leases · 26 invoices analyzed

\$99,542

4

\$201

VALUE IDENTIFIED

PRIORITIES TODAY

OPEN DISPUTE EXPOSURE

TODAY'S EXECUTIVE SUMMARY

One property requires immediate attention. The largest opportunity is unrecovered CAM from vacancy at Cascade Commons (\$18,849). The reconciled settlement is verified on the XRP Ledger. One property carries a critical risk flag. Total identified portfolio opportunity: \$99,542.

Computed live from your portfolio data — leases, invoices, reconciliations, and disputes on file.

TODAY'S PRIORITIES

High Priority

Confidence 90%

Cascade Commons

Summit Coffee & Provisions's lease has expired

The lease ended 2026-02-28 and a renewal hasn't started. Expired terms are unenforceable — including the CAM recovery language.

\$6,696 annual CAM share at risk

NEXT STEP

Confirm the end date against the lease document, then start the renewal or holdover conversation.

Lease — Summit Coffee & Provisions · expired 2026-02-28 · 1,800 sq

High Priority

Confidence 95%

Cascade Commons

2 tenant disputes need decisions

Each open dispute holds a charge in limbo — the reconciliation can't be signed off until you respond.

\$6,252 disputed exposure

NEXT STEP

Accept, reject, or request documentation — each decision is recorded with an audit hash.

Dispute — Cascade Handyman Services (\$6,051) · docs_requested

Dispute — ComfortFirst HVAC (\$201) · open

Medium Priority

Confidence 90%

Cascade Commons

10.0% of CAM costs have no paying tenant

Vacant or unbilled space means you absorb this share of operating expenses yourself — every point of occupancy recovered goes straight to the bottom line.

\$18,849 absorbed by ownership per year

NEXT STEP

Confirm which space is vacant or unbilled in the allocation results, then price the leasing opportunity.

\$188,300 in CAM costs × 10.0% with no tenant to bill

See unbilled share in results

AI Command Center — live portfolio, ranked by dollar impact

WHAT YOU'RE SEEING

The **Command Center** turns a portfolio into ranked, dollar-quantified actions. Every card deep-links to the exact item — a lease field, a dispute, a reserve — with the source evidence attached.

Not bolted on — it's the audit layer.

A wire moves money but can't prove *what for*. An RLUSD payment carries a SHA-256 fingerprint of the settlement record in its memo — the payment and its memo are verifiable by anyone, on infrastructure no one party controls.

RLUSD Dollar settlement. A regulated stablecoin — no volatility, the currency CAM is actually owed in.

FAST 3-5 second finality at sub-cent fees. No settlement float, no chargebacks.

PROOF Publicly verifiable. Landlord, tenant, and auditor check the same ledger entry.

PRIV Lease and reconciliation data stay off-chain. The ledger carries the payment, its amount, and a SHA-256 fingerprint of the settlement record — never tenant names or lease terms.

Every multi-tenant commercial lease requires this, every year.

The beachhead: owners and managers with 5–100 properties — big enough that CAM errors are real money, too small for a Yardi back office. Their tool today is Excel and an accountant.
